

Marine Engineering

This edition of Marine Engineering presents more than twenty years of evolutionary changes in the maritime industry. The book provides a complete review of marine engineering, encompassing both naval and merchant practices and incorporating the broad range of technological developments that evolved during the last decades. Also included is material presenting the principles associated with pollution control, design for production, integrated logistic support and noise control, as well as expanded coverage of propulsion shafting and piping. Long-time SNAME member Roy L. Harrington, now retired from Newport News Shipbuilding, edited this landmark volume.
